MOHSIN RAZA

Full Stack AI Developer

Islamabad, Pakistan | +92 345 650 7620 | cmohsin048@gmail.com | linkedin.com/in/mohsinraza048 | github.com/cmohsin048

PROFESSIONAL SUMMARY

Full stack AI developer with 2+ years building and shipping production web applications. Core stack is MongoDB, Express, React and Node, with TypeScript and Next.js on top. I have delivered multi-role marketplaces, SaaS platforms, LLM-backed AI features (including a tool-calling RAG assistant measured with retrieval evals) and Solana dApps — owning schema design, REST and real-time APIs, payments, third-party integrations and deployment. Comfortable across the full lifecycle, from architecture through debugging and optimisation to running the service in production.

TECHNICAL SKILLS

Core Stack	MongoDB, Mongoose, Express.js, React, Node.js, REST API design & integration
Languages	JavaScript (ES6+), TypeScript, Python, Kotlin, Solidity
Frontend	Next.js, Redux Toolkit, TanStack Query, Zustand, Tailwind CSS, shadcn/ui, Angular
Real-time	Socket.io, WebSockets, BullMQ / Redis, node-cron, IMAP & mail parsing
AI	OpenAI & Gemini APIs, tool-calling agents, RAG (embeddings, pgvector, hybrid search), LLM evals, MCP servers, crisis & content detection
Web3	Solana web3.js, wallet adapters, SPL Token, signature auth, Hardhat, Chainlink VRF
Databases	MongoDB, PostgreSQL, Supabase, Firebase, MySQL
Mobile	React Native, Expo (shared Node API); native Android in Kotlin
Cloud & DevOps	AWS (EC2, S3), Docker, Vercel, Linux, PM2, Nginx, Git, Jira (Scrum/Agile)
Integrations	Stripe, Twilio (Video & Voice), AWS S3, Sanity, Google & Microsoft OAuth

WORK EXPERIENCE

Full Stack Developer — Kakushin Islamabad · 2024 – Present

- Core contributor to **Bookmi**, a multi-role spot and service booking marketplace — built across the React web client, React Native app and shared Express/MongoDB API, with Stripe payments and webhook handling, real-time chat, calendar sync and English/Greek localisation.
- Primary developer of **RAIDS AI**, a real-time LLM integrity monitoring platform that detects rogue model behaviours and deviations from established norms — leading both the React front end and the Express/MongoDB API, with scheduled analysis jobs, Stripe billing and OAuth sign-in.
- Sole developer of **ColdWave**, a multi-tenant cold email marketing SaaS on Next.js and MongoDB, with AI-assisted campaign copy, spam checks, mailbox rotation and rate limiting, and IMAP reply tracking.
- Lead developer of **Project Vault**, an internal secrets and documentation manager with per-project access control, AES-256-GCM encryption at rest, database-backed sessions, full audit logging, and an MCP server with personal API tokens for AI client access.
- Co-led the native Android client for a national electricity utility (Kotlin, Jetpack Compose) — 350+ commits, with Microsoft Entra ID sign-in, encrypted token storage and certificate pinning.
- Implemented Web3 wallet integration and smart contract interactions for **Arena Two**, a blockchain-based live gaming platform.
- Deployed and operated services on AWS and Linux with PM2, Nginx and Docker. Worked in Agile/Scrum teams using Jira for sprint planning and cross-team collaboration.

MERN Stack Developer, Internship — Eziline Software House Islamabad · 2023

- Developed full-stack features using MongoDB, Express.js, React.js and Node.js.
- Contributed to API development, bug fixing and frontend component optimisation.

Frontend Developer, Internship — NextSalution Islamabad · 2022

- Built and styled responsive UI components in React.js, integrating REST APIs with the backend team.

PROJECTS

Bookmi — **React, React Native, Node.js, Express, MongoDB, Stripe**

Spot and service booking marketplace with web and mobile clients. Hosts, service providers, customers and admins; full booking lifecycle, ratings and reviews, shopping cart, Stripe webhooks and real-time chat.

islamicfunds.pk — AI Fund Assistant — **Next.js, TypeScript, Supabase (PostgreSQL + pgvector), Gemini, Zod**
Shariah mutual fund platform for Pakistan (NAV history back to 1996, SIP projections, fund comparison) with a streaming AI assistant. Tool-calling agent with 8 Zod-validated tools over live fund data (payout-adjusted returns up to 20 years, drawdown, SIP backtests with XIRR); RAG over 329 AMC documents (16,465 chunks) using layout-aware PDF extraction, hybrid pgvector + full-text search with rank fusion, and page-level citations; multi-key LLM failover and rate limiting. Built retrieval and answer evals that drove fixes: top-3 retrieval accuracy of 100% for named funds, and unfiltered MRR raised from 0.49 to 0.72.

RAIDS AI — **React, Node.js, Express, MongoDB**
Real-time LLM integrity monitoring that detects rogue model behaviours and deviations from established norms in production AI systems. Primary developer across front end and API.

AbilityConnect — **React, Node.js, MongoDB, Redis, Twilio Video**
Accessible video interview platform for people with disabilities, used by employers including Meta. Built to WCAG 2.1 AA with seven roles including interpreters and booth admins, real-time queue management over Socket.io, and Twilio Programmable Video with interpreter support.

Delphora — **Next.js, Solana web3.js, SPL Token**
Solana prediction market with wallet-based authentication — the wallet signs a server nonce instead of a password — plus SPL token transfers, live market updates and a wallet-gated admin dashboard.

Paiback — **Next.js, Python, Stripe, Sanity**
Flight ticket price tracking that monitors fares after purchase and automatically contacts the airline to rebook the same ticket when the price drops.

ColdWave — **Next.js, TypeScript, MongoDB, OpenAI**
Deliverability-first cold email SaaS. Lead import and enrichment, AI-assisted copy, spam checks, mailbox rotation and rate limits, IMAP reply tracking and a visual sequence builder.

EventSage — **React, Supabase, Twilio, Stripe, Python**
Event planning platform with drag-and-drop boards, a proposal builder with reusable templates, CSV and XLSX lead import, supplier invoices, referrals and subscription billing.

Project Vault — **Next.js, TypeScript, MongoDB, MCP**
Internal secrets and documentation manager. Per-project access control, AES-256-GCM encryption at rest, database-backed sessions in httpOnly cookies, audit logging down to the acting user, and an MCP server with personal API tokens for AI client access.

EDUCATION

Bachelor of Computer Science — Institute of Space Technology, Islamabad · 2024
